BODYX BK-3101

The Folding Smith Machine - All-In-One Functional Trainer upgrade to Folding the Home Gym Solution.

- Enjoy the convenience of space-saving technology without the compromise of quality and function
- BK-3101 Folding Home Gym Smith Machine can transform from a depth of 137cm to as little as 56cm

The Smith Machines ideal for improving building muscle with a lower risk of injury. Fitted with safe lock and release mechanisms and a safety catch allowing you to max out your training without the need for a spotter.

Key features:

- Steel aircraft cables, rated to 2,000 lbs
- 2 x 90kg weight stack
- Off-the-floor base

Four Steps Folding

The First Step

1. Adjust the smith bar and pulley together in the middle of the smith Rack.
2. Open the pin locks and screw nuts on the left and right sides.

The Second Step

Place the smith bar vertically to the left side.

The Third Step

Open pin lock and put down chin up station.

The Fourth Step

Close the left and right frames to complete the fold.

This is a world first for Folding Home Gym Smith Machine. All-In-One Functional Trainer upgrade to the fitness Solution.

The smith machine

The pulleys

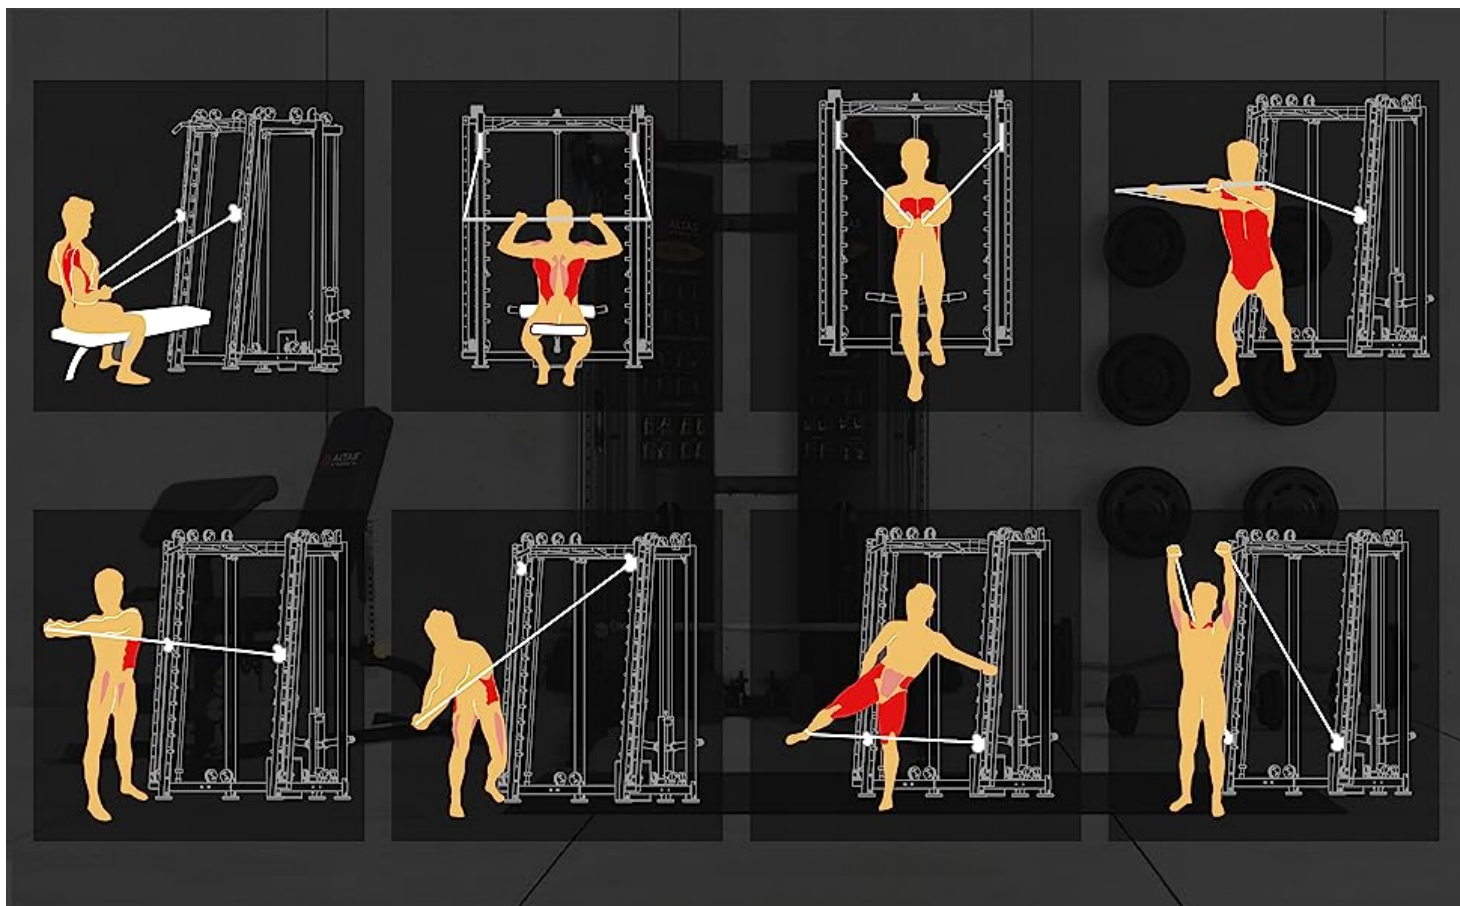

The stacks

BK-3101 utilizes high quality 25mm self-aligning linear bearings to achieve the smooth, secure movements a smith machine needs.

Dual, heavy duty swivel pulleys on the front rack form an essential component of this machine. A fixing point for the many attachments included with the BK-3101, there is little you cannot perform with this cable system.

2 x 90kg precision cut steel weight stacks allow the user to increase strength over time with 22 weight increments. These easy to access, pin select weight stacks add ease for quick-changing supersets, multiple users and much more.
